

# How to verify the NTP server is synchronize with system clock in Linux?

Can you share the command to verify whether the NTP server is synchronize with system clock in Linux.

Can you share the command to verify whether the NTP server is synchronize with system clock in Linux.

## Answers

**1:**'chronyd' is the command used for synchronisation of the system clock with NTP and to verify the NTP server is synchronize with system clock 'chronyc sources' is the command and for more verbose output with additional explanation, run the below command. Where, "\*" character in source state indicates that 'centos.pool.ntp.org' server has been used as a time source and the NTP server is currently synchronized too.
