

# listening TCP sockets on the local system in Linux.

Can you share how to display all listening TCP sockets on the local system in Linux.

Can you share how to display all listening TCP sockets on the local system in Linux.

## Answers

**1:**you can use 'ss' command to display all listening TCP socket on the local system. ss(socket statistics) is used to dump socket statistics. As shown, below:

**2:**You can also use 'netstat' command to list all TCP sockets. 'netstat' display network connections and information bout the linux networking subsystems.
